## Abstracts

Ships must carry appropriate life-saving appliances, including lifeboats, lifebuoys, life-jackets, liferafts and many others to be used by passengers and crew in case of emergency to protect their lives at sea. In the SOLAS Convention and other maritime related standards, the safety of human life is paramount. Ships and other watercraft carry life saving appliances including lifeboats, lifebuoys, life-jackets, life raft and many others. Passengers and crew are informed of their availability in case of emergency. Life-saving appliances are mandatory as per chapter 3 of the SOLAS Convention. The International Life-Saving Appliance (LSA) Code gives specific technical requirements for the manufacture, maintenance and record keeping of life-saving appliances. The number and type of life-saving appliances differ from vessel to vessel, and the code gives a minimum requirement to comply in order to make a ship seaworthy. Ship life-saving equipment is one of the important safety facilities of the ship. When a ship encounters a shipwreck and must choose to abandon ship for survival, whether the life-saving equipment is in good technical condition and whether the crew can use the life-saving equipment correctly and skillfully will directly affect the safety of the crew.

The global Ship Life-saving Equipment market size was estimated at USD 828.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
