Abstracts

Shipping desiccant is a moisture-absorbing material specially used in shipping containers, cargo containers or storage environments. It is mainly used to prevent goods from getting damp, moldy or deteriorating due to temperature and humidity changes during long-distance transportation. Due to the large temperature difference between day and night during shipping, "container rain" is easily formed inside the container, causing the packaging and goods to get damp. Therefore, using desiccant to absorb excess moisture is a common moisture-proof measure.

The global Shipping Desiccant market size was estimated at USD 846.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
