### Report Overview:

The shock absorbers for passenger cars mainly include coil springs and shock absorbers, which are also the mainstream of retrofitting shock absorbers. The figure shows adjustable shock absorbers for high, low, and damping. The main difference between traditional shock absorbers and pneumatic shock absorbers is that the components carrying the weight of the vehicle body are different. Traditional shock absorbers rely on springs, while pneumatic shock absorbers rely on air bags. Compared with pneumatic shock absorbers, traditional shock absorbers are relatively simple in structure, that is, they only have springs and shock absorbers, while pneumatic shock absorbers include shock absorbers, air bags, air pumps, air tanks, installation pipelines, air gauges and air pressure controllers, Therefore, the weight and installation space of the entire set will increase, and the construction difficulty will also be high. In addition, there will be differences in the riding experience that the two bring to the driver and passengers.

The Global Shock Absorbers for Passenger Cars Market Size was estimated at USD 873.09 million in 2023 and is projected to reach USD 1111.13 million by 2029, exhibiting a CAGR of 4.10% during the forecast period.
