Abstracts

Shoe press is an innovative solution used in the press section of paper paper-making process for efficient dewatering. It is used in the paper machine during the pressing section before it enters the drying stage. Unlike conventional press systems that use a rotating cylinder, the shoe press paper machine uses an extended nip with a flexible belt, allowing for a larger pressing area. This enhances the dewatering process, leading to higher efficiency, better sheet quality, and energy savings.

The global Shoe Press market size was estimated at USD 271.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
