Abstracts

Shoe rental service is a business service model, which mainly refers to the service provider renting various types of shoes to customers for short-term use to meet customers' temporary needs for shoes in specific occasions or activities. Shoe rental service covers many types of shoes. In the field of sports, there are sports shoes for different sports, such as football shoes, basketball shoes, tennis shoes, etc. In the field of fashion, there are various styles of high heels, flat shoes, boots, etc. High heels have different heel heights, shoe shapes and materials, and are used to match different clothes to participate in social events, dinners or business occasions; flat shoes pay more attention to the combination of comfort and fashion, suitable for daily wear or long-term walking occasions. People's desire for possession of goods is gradually weakening, and they pay more attention to practicality and economy. As a light-asset consumption model, the market demand for shoe rental services is growing. Especially in some special occasions, such as weddings, business activities, sports events, etc., people have a large temporary demand for shoes, which has prompted the continuous expansion of the application scenarios of shoe rental services. Diversified development: Consumers' demand for shoe rental is no longer limited to the traditional types, but covers multiple fields such as fashion, sports, business, and leisure. The requirements for shoe styles, colors, sizes, etc. are also more personalized. Using Internet of Things technology and intelligent management systems, shoe rental companies can achieve real-time monitoring and management of shoe inventory, timely understand the in and out of the warehouse, inventory quantity, rental status and other information of shoes, optimize inventory configuration, and reduce operating costs. By installing electronic tags on shoes, accurate positioning and tracking of shoes can be achieved, and management efficiency can be improved. Affected by the sharing economy, the shoe sharing rental model is expected to develop further. Consumers can rent their idle shoes to the platform to obtain certain income, and they can also rent shoes from other

users from the platform to achieve resource sharing and recycling, and reduce consumption costs.

The global Shoe Rental Service market size was estimated at USD 97.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Shoe Rental Service market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
