Report Overview

Shoe sole attaching are mainly used to firmly fit the bottom (outsole) of a shoe to the upper (vamp). The working principle of different types of sole laminating machines may vary, but by and large, they are used to fit the sole to the upper by applying a certain amount of pressure. For example, a pneumatic double-ended sole laminator controls the pressure by means of a pneumatic system, while a hydraulic heavy-duty wall-type sole laminator does so by means of a hydraulic system.
