Abstracts

Shop Primer is a rust preventing paint for temporary protection of steel applied immediately after blasting, generally in low thickness and before welding and other fabrication. Shop primers are typically used in preconstruction processes to protect steel during handling, storage, and transport without affecting the material's cutting or welding properties. Specifically, shop primers provide effective protection against corrosion, which can occur if steel is left in storage for extended periods of time, or if it is exposed to environmental factors that would otherwise degrade its integrity. Beyond providing corrosion protection, industrial shop primers coatings also serve as secondary surface preparation agents. They enhance the steel substrate's ability to withstand the abrasions and chemical exposures that occur during typical production processes. When properly deployed, shop primers can also support efficient cutting, welding, and forming, increasing overall production speed and helping companies control costs while improving quality and performance. The Shop Primer industry can be broken down into several segments, Zinc Silicate Shop Primer, Epoxy Shop Primer, etc. Across the world, the major players cover AkzoNobel, Jotun, etc. Global key shop primer players include AkzoNobel, AkzoNobel, PPG Industries etc. The top 3 companies hold a share about 40%. Asia-Pacific is the largest market, with a share about 40%, followed by Europe and North America with the share about 27% and 22%. In terms of product, zinc silicate shop primer is the largest segment, with a share over 50%. And in terms of application, the largest application is metal finishing and fabrication, followed by marine and offshore constructions.
