## Abstracts

The Shore-to-Ship Solution is a comprehensive set of technologies and management systems designed to enable ships to safely, efficiently, and reliably obtain power from the port's shore-based power system while berthing, replacing the ship's own fuel-fired generators. This reduces pollutant emissions (such as sulfur oxides, nitrogen oxides, and particulate matter), reduces noise pollution, saves fuel costs, and improves environmental quality and energy efficiency in the port and surrounding areas. The solution encompasses the R&D and production of shore power equipment, the construction and renovation of port shore power facilities, the configuration and adaptation of ship power receiving equipment, the design and operation of connection systems, the compatibility and control of electrical systems, as well as the development of relevant standards, policy support, and operational management.

The global Shore-to-Ship Solution market size was estimated at USD 1731.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
