Abstracts

Short-Acting Beta-Agonists (SABAs): Are typically used as "rescue" medications to provide quick relieve of asthma symptoms. Not yet available. Relief of asthma symptoms and prevention of exercise-induced asthma ages 4 and above. The inhalation combination product market is driven by the increasing prevalence of respiratory diseases such as asthma and chronic obstructive pulmonary disease (COPD) and the demand for more effective and convenient treatment options. Inhalation combination products offer a combination of two or more medications in a single device, providing patients with better disease management and improved treatment adherence. These products offer advantages such as simplified dosing regimens, enhanced efficacy, and reduced side effects compared to multiple separate inhalers. Additionally, advancements in inhalation technology, such as metered-dose inhalers and dry powder inhalers, have further fueled the adoption of combination products. However, the market also faces challenges, including the complexity of formulation development and the need for rigorous testing to ensure compatibility and stability of the combined medications. Moreover, regulatory requirements for combination products can be more stringent than individual drugs, making the approval process more challenging. To succeed in this market, manufacturers must invest in research and development to optimize combination therapies, address regulatory concerns, and educate healthcare professionals and patients about the benefits of inhalation combination products.

The global Short Acting Beta Agonists market size was estimated at USD 4823.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
