Abstracts

Short-acting GLP-1RAs, or short-acting Glucagon-Like Peptide-1 Receptor Agonists, have a relatively shorter half-life, which is advantageous for slowing gastric emptying and, thus, better controlling post-meal blood sugar levels. Short-acting GLP-1RA (Glucagon-Like Peptide-1 Receptor Agonist) is a class of drugs used to treat type 2 diabetes by mimicking the action of the GLP-1 hormone, leading to increased insulin secretion, decreased glucagon secretion, slowed gastric emptying, and a sense of fullness. Currently, the market share of short-acting GLP-1RA is relatively small. However, with ongoing innovation and technological advancements in the diabetes treatment field, short-acting GLP-1RA presents potential growth opportunities in the pharmaceutical market. Due to its rapid effects and more flexible administration, short-acting GLP-1RA is attractive for patients in need of more timely and personalized treatment. In the future, as medical technology continues to advance, short-acting GLP-1RA is expected to play a more significant role in diabetes treatment, providing patients with more effective medication choices.

The global Short-acting GLP-1RA market size was estimated at USD 7133.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
