Report Overview

Short-term bread refers to bread with a shelf life of 4-15 days (7-15 days in winter and 4-7 days in summer) and a sales radius of 300-500km. Due to the short shelf life of short-term bread, the requirements for stable logistics distribution and channel terminal construction are relatively high. Unimpeded terminal channels can reduce the return rate, and increasing the number of outlets within the coverage of the central factory will effectively increase sales in the unit area.
