Abstracts

Short term car insurance is a specialized insurance product designed to provide temporary coverage for vehicles, typically ranging from one hour to 28 days, though some policies may extend up to three months, catering to individuals who require flexible, non-traditional protection without committing to long-term annual policies; it is commonly utilized in scenarios such as borrowing or test-driving a car, covering gaps between standard insurance terms, or for temporary vehicle usage during travel, and differs from conventional annual auto insurance by offering tailored, short-duration contracts that emphasize convenience, immediate activation, and often higher premium rates per day due to administrative costs and perceived higher risk associated with transient coverage periods.

The global Short Term Car Insurance market size was estimated at USD 3170.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.65% during the forecast period.
