## Abstracts

Short Wave Infrared Radiation Fixed-Focus Lens is an optical lens specifically designed for use in the shortwave NIR spectral region (the wavelength range is usually between 0.9 $\mu$ m and 1.7 $\mu$ m), with a fixed focal length that provides high-resolution and high-contrast imaging effects. This lens is widely used in industrial inspection, monitoring, scientific research and other fields, especially in the need to penetrate smoke, dust, moisture and other environmental conditions for observation and detection of the scene. Unlike zoom lenses, prime lenses are often able to achieve higher standards in optical performance due to their fixed focal length design, such as larger apertures, higher sharpness, and lower aberrations, thus providing more stable and higher quality images for imaging in a specific wavelength range.

The global Short Wave Infrared Radiation Fixed-Focus Lens market size was estimated at USD 119.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
