Short Wave Infrared (IR) Heaters are a type of heating device that emit infrared radiation with a shorter wavelength, typically in the range of 0.75 to 1.5 micrometers (μm). Unlike traditional convection heaters that heat the air, short wave IR heaters directly heat objects and people within their line of sight by emitting high-energy infrared radiation. This direct form of heating is more efficient because it minimizes heat loss to the surrounding environment.

The global Short Wave IR Heaters market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
