Report Overview:

A short wave ultraviolet lamp refers to a specialized device generating non-visible radiation primarily in the 200–400 nanometer range, typically employed for disinfection purposes. Unlike regular UVB lamps commonly found in tanning beds or sunlamps, SWUV tubes emit higher intensity radiation. The application areas span medical institutions requiring thorough decontamination of instruments or surgical sites; laboratory research aiming to eradicate sample contamination before analysis or experimentation; and food processing plants intending to eliminate pathogens without altering nutritional content or texture aspects.
