## Abstracts

The detector works in the short-wave infrared band, which can obtain more radiation energy from the target. In addition, the detection and imaging of near-room temperature targets by short-wave infrared is similar to the reflective imaging of visible light. On the one hand, it has the detail resolution capability that mid- and long-wave infrared detection lacks, and on the other hand, it has the ability to penetrate smoke and image, which is not available in visible light detection.

The global Shortwave Cooled Infrared Detector market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Shortwave Cooled Infrared Detector market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
