Abstracts

Shot blasting abrasives are granular materials used in surface preparation processes where they are propelled at high velocity to clean, descale, deburr, or otherwise modify the surface of a material, typically metal, concrete, or composites, by removing contaminants, rust, old coatings, or imperfections through mechanical impact. These abrasives are distinct from loose abrasives used in grinding or polishing, as they are specifically engineered for high-impact applications in equipment such as blast rooms, cabinets, or automated wheelblast systems, and can be metallic (like steel shot or grit), non-metallic (such as aluminum oxide, garnet, or crushed glass), or organic (like walnut shells or corn cob grit), with selection depending on factors like desired surface profile, material hardness, recyclability, and environmental considerations.

The global Shot Blasting Abrasives market size was estimated at USD 1825.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
