The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Shot Peening Shot competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Shot peening abrasives, in surface treatment technology, refer to a type of granular material used in shot peening process. Shot peening is a cold working process that uses compressed air or mechanical centrifugal force to spray a large number of small-diameter pellets (usually called shot peening materials) at high speed onto the surface of the workpiece to achieve a variety of effects such as cleaning, strengthening, increasing residual compressive stress, and improving the fatigue strength of the workpiece. Shot peening materials are widely used in many fields such as automobiles, aerospace, ships, and machinery manufacturing. In the automotive industry, shot peening technology is used to improve the surface hardness and wear resistance of engine cylinder blocks, crankshafts and other parts; in the aerospace field, shot peening technology is used to improve the fatigue strength and corrosion resistance of key components such as aircraft landing gear and engine blades. In 2024, global Shot Peening Shot sales reached approximately 327.2 k tons, with an average global market price of around \$809 per ton. The production capacity of Shot Peening Shot in 2024 is approximately 350 k tons. The gross profit margin of Shot Peening Shot is between 15% and 25%. Shot peening abrasives are widely used in many fields such as automobiles, aerospace, shipbuilding, and foundries. In the automotive industry, shot peening technology is used to improve the surface quality and durability of automotive parts; in the aerospace field, shot peening technology is used to improve the surface quality and performance of aircraft. With the upgrading of the manufacturing industry and the development of emerging fields, the demand for shot peening abrasives will continue to increase. In particular, the demand for shot peening technology in

aerospace, automobile manufacturing and emerging fields will continue to grow, driving the market to further develop. Technological innovation is an important driving force for the development of the shot peening abrasives market. With the development of intelligent manufacturing and automation technology, shot peening equipment will gradually realize intelligence and automation, improving production efficiency and product quality. At the same time, environmental protection, energy saving and customized technology have also become important directions for future development. In summary, the shot peening abrasives market shows a good development trend and broad market prospects both at present and in the future.
