Abstracts

Shotcrete Accelerator is a chloride free, non-caustic accelerator primarily used in shotcrete applications. Shotcrete Accelerator has two main effects on shotcrete. It provides rapid setting or stiffening so the newly applied shotcrete can begin to support almost immediately. It also provides high early strength to allow loading at an early stage. Accelerator is a kind of chemical admixture that makes cement set quickly. It can set and harden cement in a short period of time. It is mainly used in sprayed concrete and sprayed mortar projects. Shotcrete has many advantages in construction and rock support. It has become a very important and necessary measure in modern underground engineering. In particular, the development of wet-mix shotcrete technology has greatly expanded the use of shotcrete in underground engineering. range. The main function of the liquid accelerator for sprayed concrete is to accelerate the setting of the concrete mixture and improve the early strength, which can increase the thickness of the spray layer and shorten the time for spraying the next layer. With economic development and technological progress, the application of accelerators has become more and more extensive, such as mines, tunnels, leak plugging, underground engineering, etc. Global Shotcrete Accelerator key players include BASF SE, Sika AG, Denka, Mapei SpA, GCP Applied Technologies, etc. Global top five manufacturers hold a share about 47%. Asia-Pacific is the largest market, with a share about 50%, followed by Europe and North America, both have a share about 41 percent. In terms of product, Liquid Accelerator is the largest segment, with a share over 64%. And in terms of application, the largest application is Tunneling, followed by Mining, etc.

The global Shotcrete Accelerator market size was estimated at USD 773.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
