Report Overview

Shoulder fired weapons could be classified as 'anti-tank' or 'anti-aircraft' that uses a launcher to fire the warhead at the target. The projectile fired include guided as well as unguided missiles and grenades. Unlike other missile systems which tend to be bulky and require operational expertise, shoulder fired weapons are small enough to be carried by a single person and operated easily with much less level of training required. On the basis of component, the shoulder fired weapons market has been segmented into launcher and ammunition. The launcher segment is projected to grow at the highest CAGR during the forecast period. The rising demand for shoulder fired weapons can be attributed to several factors including increasing focus on close combat scenario, upgradation of existing old generation systems, need for man portable air defense systems, and precision strike on enemy platforms, among others.
