Abstracts

A shoulder orthosis system is a medical device designed to support, immobilize, stabilize, or correct the position of the shoulder joint and surrounding musculoskeletal structures, typically used post-surgery, after injuries such as dislocations or rotator cuff tears, or to manage chronic conditions like arthritis or instability. These systems range from simple slings and immobilizers to more advanced, adjustable braces with features like abduction pillows, strapping mechanisms, and range-of-motion controls, often incorporating materials such as breathable fabrics, lightweight plastics, and metal components to balance comfort, durability, and therapeutic effectiveness. The design aims to facilitate healing, prevent further injury, and assist in rehabilitation by limiting undesirable movements while allowing prescribed motion as recovery progresses.

The global Shoulder Orthosis System market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
