Abstracts

Shovel crimping terminals are specialized electrical connectors designed with a flat, spade-like end for secure attachment to screw or stud-type terminals, enabling quick and reliable connections in various electrical applications. These components feature a crimp barrel section that is mechanically compressed onto a wire using a specialized crimping tool, ensuring a gas-tight, low-resistance connection that resists vibration and corrosion. Widely used in automotive, industrial equipment, consumer electronics, and appliance wiring, shovel terminals are valued for their ease of installation, reusability, and ability to facilitate maintenance and repairs without soldering. They are typically available in insulated and non-insulated variants, with color-coded insulation often indicating wire gauge compatibility, and are manufactured from materials such as copper, brass, or tin-plated alloys to ensure conductivity and durability.

The global Shovel Crimping Terminal market size was estimated at USD 1295.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.12% during the forecast period.
