## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Si Avalanche Photodetector Module competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Si avalanche photodetector module is a semiconductor optoelectronic device based on silicon material, utilizing avalanche multiplication effect for high-sensitivity detection of weak optical signals. Typically integrating avalanche photodiodes (APD), temperature compensation circuits and signal processing units, it features high gain ( $10^2$ - $10^3$ ), fast response (ns level) and low noise. With operational wavelength range of 400-1100nm, it can achieve single-photon detection in Geiger mode. Mainly applied in LiDAR, optical communications, quantum technology and biofluorescence detection, serving as a core component for weak light detection in photoelectric systems. The Si APD module market is growing rapidly with autonomous driving and 5G deployment, showing three technological trends: 1) Array integration for area detection; 2) System-on-Chip (SoC) design for higher integration; 3) Low-power optimization for extended operation. Industrial applications drive demand for high-reliability modules, while consumer-grade applications promote low-cost solutions. International manufacturers focus on performance improvement through process optimization, while domestic companies seek breakthroughs in specialized markets.

The global Si Avalanche Photodetector Module market size was estimated at USD 681.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.70% during the forecast period.
