Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SiC CMP Slurry competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Silicon Carbide (SiC) is a wide band gap semiconductor that can operate at higher temperature, power level, and voltage. This enables improved energy efficiency in power devices, LED lighting, and telecommunications. Because of its unique properties, SiC is the material of choice for diverse applications such as Hybrid Electric vehicles, power electronic switches, and LED lighting technology. This report studies the CMP slurry for SiC wafer. The typical products include Entegris (Sinmat)'s SiC CMP slurry, Saint-Gobain's ClasSiC 807 and ClasSiC 102V slurry, Fujimi's COMPOL and DSC series slurry, etc. Global key players of SiC CMP Slurry include Entegris (CMC Materials), Saint-Gobain, Fujimi Corporation, etc. The top three players hold a share about 85%. In 2025, China will be the largest market, and has a share about 46%, followed by USA and Europe with share 39% and 10%, separately. In terms of product type, SiC Colloidal Silica Slurry is the largest segment, occupied for a share of 53%. In terms of application, 6 Inch SiC Wafer has a share about 84 percent. We believe the global Chemical Mechanical Polishing (CMP) slurry industry for Silicon Carbide (SiC) substrates is entering a critical rapid growth phase, primarily driven by the explosive growth in its end markets, such as Electric Vehicles (EVs), charging infrastructure, industrial power, and renewable energy. The core driving factors lie in the massive and sustained demand for SiC power devices. 1. New Energy Vehicles (EV/HEV): This is the paramount driver. SiC devices are being adopted on a large scale due to their ability to offer higher efficiency, faster switching speeds, and greater power density in inverters, on-board chargers, and DC/DC converters, thereby extending EV range and reducing charging time. This directly propels the demand for upstream SiC substrates

and CMP slurries. 2. Energy Infrastructure and Industrial Applications: The surge in demand for high-efficiency power devices in green energy (such as photovoltaic inverters, wind energy converters), as well as power management in data centers, 5G base stations, and smart grids, is further expanding the SiC device market. 3. Technological Barriers and Scarcity: The manufacturing of SiC substrates, particularly the CMP step, involves extremely high technical difficulty and narrow process windows. The scarcity and high-value nature of high-quality slurries establish this segment as a high-growth, high-margin critical consumable market.

The global SiC CMP Slurry market size was estimated at USD 73.64 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.30% during the forecast period.
