Report Overview

SiC coated graphite trays are specialized trays used in various high-temperature industrial processes, particularly in semiconductor manufacturing and other applications requiring extreme thermal stability and resistance to chemical corrosion. These trays are typically made of graphite, a lightweight and conductive material, which is coated with a layer of silicon carbide (SiC). This SiC coating provides enhanced durability, thermal shock resistance, and chemical inertness, making the trays ideal for environments with aggressive chemical reactions and high operating temperatures. SiC coated graphite trays are widely used in processes such as chemical vapor deposition (CVD), epitaxial growth, and high-temperature annealing, where they help maintain product quality and prolong equipment lifespan.
