Report Overview

SiC flat membrane is made of high-purity silicon carbide powder sintered at high temperature. It is currently the best membrane material with hydrophilicity and anti-pollution ability. It has a highly negatively charged membrane surface, which can ensure excellent anti-pollution properties of the membrane surface in a wide pH range; under ideal operating conditions, when PAC is added to make the pH less than 6, the membrane surface can maintain a negative charge of -25~-30 millivolts, making it difficult for dissolved organic carbon and transparent exopolymer particles to adhere to the membrane surface; Silicon carbide flat membrane can easily wash away negatively charged substances in the water from the membrane surface, such as bacteria, algae, MLSS, transparent exopolymer particles and oil substances.
