Report Overview

A power component is a semiconductor, which is used as a switch or a rectifier in the power electronic system. SiC is a compound semiconductor comprised of silicon and carbon and has 10 times the dielectric breakdown field strength, bandgap, and thermal conductivity than silicon. The special characteristics of SiC power devices include high-temperature operation stability, high thermal conductivity, high-energy bandgap, and faster switching time. These characteristics of SiC power devices are encouraging original equipment manufacturers (OEMs) to adopt these devices over traditional Si power devices.
