Abstracts

SiC sandblasting nozzle is a precision nozzle made of high-hardness silicon carbide material. It is mainly used to spray abrasives during sandblasting to achieve cleaning, deburring and surface treatment of workpieces. Its distinctive feature is its extremely high hardness and wear resistance, which enables it to maintain long-term stable performance in harsh sandblasting environments. The advantage of silicon carbide sandblasting nozzles is that it has strong wear resistance and corrosion resistance, and its service life is far longer than that of traditional nozzle materials, effectively reducing replacement frequency and maintenance costs. In addition, it can maintain good mechanical properties in high-temperature environments, providing an efficient and reliable solution for the industrial sandblasting field, greatly improving the efficiency and quality of sandblasting.

The global SiC Sandblasting Nozzle market size was estimated at USD 381.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
