In 2024, global Side beam X-ray inspection system production reached approximately 3843 units, with an average global market price of around K US\$ 140 per unit. Side beam X-ray inspection system is a kind of special equipment which adopts horizontal or oblique X-ray beam to penetrate vertical and tall packaging containers, captures internal structure images through detectors, and realizes foreign body detection, filling volume control and packaging integrity analysis. Its core advantage lies in the high sensitivity scanning of the side wall, bottom and top areas of the high-type container, especially suitable for wet, high salt and other materials with strong "product effect", which can effectively detect foreign bodies such as metal, glass, stone and bone spur, while avoiding the misjudgment caused by the conductivity of the traditional metal detector.

The global Side Beam X-Ray Inspection System market size was estimated at USD 538.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
