Abstracts

Side emitting LED strips are specialized linear lighting solutions engineered to project light perpendicularly from the edge of the strip, rather than directly outward from the top surface, enabling uniform illumination along the entire length with minimal visible hotspots or individual diodes. These strips utilize advanced optical designs, such as micro-prism lenses or specialized diffusers, to redirect light sideways, making them particularly suitable for applications requiring discreet, indirect, or architectural lighting effects, such as coves, alcoves, shelving, signage, and decorative installations where traditional top-emitting strips would be obtrusive or create uneven lighting patterns.

The global Side Emitting Led Strip market size was estimated at USD 1150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
