## Abstracts

Side Fire Fiber Probe is a special fiber probe whose end face is specially designed to emit a beam of light in a direction almost perpendicular to the fiber axis. The end face of this fiber is usually cut at a specific Angle, using Brewster Angle to achieve full reflection, so that the light is emitted from the side of the fiber. Side-emission fiber probes have important applications in medical technology, such as in laser medicine for tissue removal within cavity organs, such as the treatment of prostate hyperplasia. Its slim diameter and glass dome design allow it to be inserted into the body through an endoscope, precisely to the treatment area.

The global Side Fire Fiber Probe market size was estimated at USD 156.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
