Report Overview

Side guard door beams are the safety beams that protect the passengers when collisions occur. When a crash occurs from one side of the car, the door beams absorb the energy created so as to protect the passenger. If the door beams are not present, then the impact will be high and the door would not sustain the force exerted during collision. The side guard door beams are made up of steel, aluminum, and plastic. Steel beams are widely used due to the higher sustainability and durability while aluminum being lighter in weight increases the fuel efficiency in the vehicle.
