## Abstracts

The development of side-loading refrigerated mortuary cabinets is a growing trend in the funeral industry. These cabinets are designed to provide a more efficient and convenient way to store and access deceased bodies. Traditionally, mortuary cabinets have been front-loading, requiring bodies to be loaded and unloaded from the front of the cabinet. This process can be time-consuming and physically demanding for funeral home staff. Side-loading cabinets, on the other hand, allow bodies to be easily loaded and unloaded from the side, reducing the strain on staff and improving workflow. One of the key advantages of side-loading cabinets is their space-saving design. These cabinets can be installed against a wall, maximizing the use of available space in the funeral home. This is particularly beneficial for smaller funeral homes or those with limited space. Another benefit of side-loading cabinets is the improved organization and accessibility they offer. With front-loading cabinets, bodies are typically stacked on top of each other, making it difficult to access a specific body without moving others. Side-loading cabinets, on the other hand, typically have individual compartments or drawers, allowing for easy identification and retrieval of a specific body.

The global Side-loading Refrigerated Mortuary Cabinet market size was estimated at USD 424.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
