Abstracts

Side mounted agitators are mechanical devices affixed to the exterior of tanks, vessels, or reactors, typically through a flange or mounting bracket, featuring a motor-driven shaft that extends horizontally into the container to rotate impellers or blades for the purpose of mixing, blending, suspending solids, promoting heat transfer, or facilitating chemical reactions in fluid media; these agitators are distinguished by their external mounting, which eliminates the need for top-entry space and simplifies maintenance, making them particularly suitable for applications in industries such as chemicals, pharmaceuticals, food and beverage, wastewater treatment, and mining, where space constraints, hygiene requirements, or corrosive environments are common considerations.

The global Side Mounted Agitators market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
