Report Overview

Side window X-ray tubes are a common type of X-ray generator commonly used in medical imaging, industrial testing, and scientific research. It is different from traditional end window X-ray tubes in that its main characteristics lie in the way X-rays are generated and the structural design. The anode of a side window X-ray tube (the part that produces X-rays) usually has a side or side window through which X-rays can be released. In contrast, the X-rays from end window X-ray tubes are released through small holes at the top or bottom. Side window X-ray tubes are suitable for applications that require large areas or lateral emission of X-rays, such as CT scanning in medical imaging, non-destructive testing in industry (such as weld detection, material defect detection), and material analysis in scientific research.
