Abstracts

A Sidecar Motorcycle, often simply called a "sidecar rig," "outfit," or "hack," is a three-wheeled vehicle combination consisting of a standard two-wheeled motorcycle (or scooter/bicycle) to which a single-wheeled sidecar attachment has been permanently affixed. This attachment is typically a small, separate body positioned to the side of the motorcycle, supported by its own wheel, and designed to carry one passenger or cargo. The entire setup creates an asymmetrical three-track vehicle, fundamentally altering the handling from that of a solo motorcycle?it no longer leans into turns. Historically, sidecar rigs were a popular and inexpensive alternative to cars for family transport until the 1950s, and they remain in use today for recreational riding, utility, and military/police applications.

The global Sidecar Motorcycles and Attachments market size was estimated at USD 1200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
