## Abstracts

Sidetracking is the drilling of a new lateral from an existing well that has poor or no productivity due to mechanical damage to the well or depleted hydrocarbons at that particular site. The original well bore in the no longer productive zone is plugged back and deviated or horizontal drilling is used to drill a new lateral wellbore to install a new productive well or access a nearby productive zone. Various applications of sidetracking include damage to the hole by junk, damage to the production zone in the original well, tap into another less depleted drainage area, and others. Moreover, the rise in demand for energy, urbanization, industrialization, growing exploration, and others are some of the factors, which fuel the market growth over the forecast period.

The global Sidetrack Drilling market size was estimated at USD 514.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
