Abstracts

Sidetracking is an advanced technique of drilling in which a new lateral is drilled from an existing well that has poor productivity due to mechanical damage at a particular well site. Wells generally require sidetracking to re-drill the well to a new target. Various applications of sidetracking include damage to the hole by junk, damage to the production zone in the original well, tap into another less depleted drainage area, and others. Moreover, the rise in demand for energy, urbanization, industrialization, growing exploration, and others are some of the factors, which fuel the market growth over the forecast period.

The global Sidetracking market size was estimated at USD 514.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Sidetracking market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
