Report Overview

Sight glasses, also known as sight windows or inspection glasses, are transparent viewing devices installed in tanks, pipelines, or vessels to allow visual monitoring of fluid levels, flow conditions, or internal processes without interrupting operations. They are commonly used in industries such as oil and gas, chemical processing, pharmaceuticals, food and beverage, and water treatment, where maintaining visibility of internal conditions is critical for safety, efficiency, and regulatory compliance. Sight glasses are typically constructed from durable materials like borosilicate glass, tempered glass, or polycarbonate, designed to withstand high pressures, temperatures, and corrosive environments. Advanced versions may incorporate lighting, wipers, or protective coatings to enhance visibility and longevity.
