The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silage Bagging Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Silage bagging machine is a mechanical device used to automatically bag silage. Silage is usually made from feed materials such as silage corn and silage grass, and is preserved through fermentation. The main function of the bagging machine is to automatically fill these processed feeds into pre-made bags or other packaging containers for convenient storage, transportation and sales. The global silage bagging machine market has shown a steady growth trend in recent years. On the technical level, intelligence and automation have become the mainstream trend. Chinese companies such as Wuzheng and Jinkefeng have launched self-propelled silage harvesting and baling machines and baling and film wrapping machines, integrating the Internet of Things and sensor technology to achieve automatic winding, remote monitoring and one-stop operation; international giants such as John Deere use intelligent control systems to optimize cutting accuracy and grain crushing effects to improve operating efficiency. Environmental protection regulations promote the application of degradable packaging materials. At the same time, policy support from various countries has increased. China's "grain to feed" policy and agricultural machinery purchase subsidies have significantly reduced equipment procurement costs and promoted market penetration. In terms of competition, international brands such as John Deere and AGCO have an advantage in the high-end market, while Chinese companies have risen rapidly with technological breakthroughs and cost-effectiveness. The performance of domestic equipment has approached the international level and the market share continues to expand. In the future, the market will develop towards intelligence, environmental protection and miniaturization. Chinese companies plan to

develop segmented products such as mountain silage machines and expand overseas markets through international cooperation. The global market is expected to maintain growth driven by emerging economies.

The global Silage Bagging Machine market size was estimated at USD 663.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
