Abstracts

Silane water repellent is a class of organosilicon compounds applied as protective coatings to porous construction materials such as concrete, masonry, brick, and natural stone, designed to penetrate the substrate and chemically bond with it to form a hydrophobic barrier that repels liquid water while still allowing water vapor to escape, thereby reducing water absorption, preventing freeze-thaw damage, inhibiting mold and efflorescence growth, and enhancing the durability and longevity of treated surfaces without significantly altering their appearance or breathability.
