Abstracts

Silica-based matting agents are specialized additives incorporated into coatings, inks, plastics, and other surface finishes to reduce gloss and create matte or satin effects by scattering light through microscopic, controlled surface irregularities. These agents consist of synthetic amorphous silica particles engineered with precise particle size distribution, porosity, and surface treatments to optimize dispersion, compatibility, and performance in various resin systems. Their effectiveness hinges on the ability to create uniform micro-roughness on cured surfaces without compromising mechanical properties, transparency, or chemical resistance.

The global Silica Based Matting Agents market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
