## Abstracts

A silica-based zeolite membrane, also known as a zeolite membrane, is a synthetic membrane made from crystalline aluminosilicate materials composed primarily of silicon, aluminum, and oxygen, with charge-balancing cations such as Na<sup>+</sup> and Ca<sup>2+</sup>. These membranes feature a well-defined microporous structure, enabling selective separation of molecules based on size, shape, and polarity. As a low-energy separation technology, silica-based zeolite membranes offer significant advantages over conventional separation methods, such as distillation or adsorption, by providing high selectivity and permeability with reduced energy consumption. From the regional perspective, Asia-Pacific is the world's leading consumption region, market sales revenue in 2024 was US\$ 33.52 million, accounting for 48.21% of the global market. It is expected to reach US\$ 65.35 million in 2031, the global market share will reach 50.96%. From the perspective of product type, silica-based zeolite membrane is mainly divided into CHA, NaA and Others. The sales of NaA was US\$ 42.78 million in 2024, and the market share reached 61.53%. As Silica-based Zeolite Membranes are not yet widely used commercially, there are fewer market players, currently Mitsubishi Chemical, Kanadevia Corporation, Pervatech, Fraunhofer IKTS, Dalian HST Technology etc. In 2024, the global top three players had a share approximately 65.74% in terms of revenue.

The global Silica-based Zeolite Membrane market size was estimated at USD 69.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
