Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silica Gel for Beer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Beer silica gel is an amorphous, microporous solid powder, the main component of which is $\text{SiO}_2 \cdot n\text{H}_2\text{O}$. It is non-toxic, tasteless, and insoluble in water and solvents. Beer silica gel has a large specific surface area and countless suitable microporous structures. It can absorb proteins that cause beer turbidity within a few minutes. After filtering and removing, it can extend the storage period of beer by 180-240 days and prevent beer from becoming cold and turbid. At the same time, it has no effect on the foam and taste of beer. It is recognized as the safest beer stabilizer in the world beer industry.

The global Silica Gel for Beer market size was estimated at USD 167.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
