Report Overview

Silica fume concrete is a kind of high-performance concrete added with silica fume when producing concrete, and each index of concrete quality is several times higher than that of the traditional concrete without silica fume. The addition of silica fume can change some important physical performance indexes of concrete. According to the observation under the electron microscope, there is crystal growth in the voids of the cement paste of the concrete mixed with silica fume. Silica fume particles can fill the pores of relatively large cement particles, reducing the volume of pores. However, the large specific surface area of silica fume has greater influence on the workability.
