Abstracts

Silicon-based new materials refer to advanced materials derived from silicon that exhibit enhanced or novel properties compared to conventional silicon, including but not limited to silicon carbide (SiC), silicon nitride (Si?N?), porous silicon, silicon nanowires, and amorphous silicon alloys, which are engineered for specific high-performance applications in semiconductors, photovoltaics, energy storage, optoelectronics, and advanced ceramics, leveraging silicon?s abundance, tunable electronic characteristics, and structural versatility to meet demands for efficiency, durability, and miniaturization in next-generation technologies. The global market for silicon-based new materials is experiencing robust growth, driven primarily by escalating demand from the electric vehicle (EV) and renewable energy sectors, where materials like silicon carbide are critical for power electronics that improve energy efficiency and thermal management, while advancements in silicon anode technology for lithium-ion batteries enhance energy density and charging speed; key regional markets include Asia-Pacific, led by China?s aggressive investments in semiconductor and solar manufacturing, North America with strong R&D initiatives in electric mobility and aerospace, and Europe focusing on sustainable energy solutions and automotive electrification, though the market faces challenges such as high production costs, complex manufacturing processes, and supply chain constraints for high-purity silicon; nevertheless, with continued innovation in material synthesis and expanding applications in 5G infrastructure, IoT devices, and biomedical sensors, the market is projected to grow significantly, supported by governmental policies promoting clean energy and technological sovereignty.

The global Silicon Based New Materials market size was estimated at USD 12000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
