The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silicon Bronze Rod competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Silicon bronze rod is a very important alloy material in modern industrial manufacturing, composed of various metal elements such as copper, tin, and silicon (its main chemical composition is copper (Cu) 75%, aluminum (Al) 8%, silicon (Si) 2%, other alloy elements, etc.), with high strength, corrosion resistance, and wear resistance. It is widely used in many fields, such as mechanical parts, electronic components, ship parts, automotive parts, etc. Silicon bronze rods are added with silicon elements during the manufacturing process, which not only improves the fluidity and wear resistance of copper tin alloys, but also enhances their mechanical and corrosion resistance properties, making them widely used in industrial manufacturing.
