Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silicon Bronze Welding Wire competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Silicon bronze welding wire is a copper alloy welding filler material with copper as the base and silicon and a small amount of manganese added. It has excellent fluidity and deoxidation properties, and can be stably deposited in the range of 815-955°, but the hot brittleness tendency in this temperature range must be avoided to prevent cracks. Silicon bronze welding wire is mainly used for argon arc welding and arc brazing. It can weld silicon bronze, copper, brass, steel, cast iron and other substrates. It is especially suitable for argon arc brazing of galvanized steel plates because of its good corrosion resistance, less zinc coating burnout, and excellent corrosion resistance of the welded joint.

The global Silicon Bronze Welding Wire market size was estimated at USD 315.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
