Abstracts

Silicon carbide composite refers to a class of advanced materials that combine silicon carbide (SiC)?a hard, brittle ceramic known for its exceptional thermal stability, mechanical strength, and chemical resistance?with reinforcing phases such as fibers, whiskers, or particulates, often embedded within a matrix (which may be ceramic, metallic, or polymeric) to enhance toughness, reduce brittleness, and tailor properties for specific high-performance applications. These composites are engineered to leverage the intrinsic advantages of silicon carbide, such as its high thermal conductivity, low thermal expansion, and excellent wear and corrosion resistance, while mitigating its inherent fragility through strategic reinforcement, resulting in materials capable of withstanding extreme environments in sectors like aerospace, defense, energy, and industrial manufacturing.

The global Silicon Carbide Composite market size was estimated at USD 925.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
