Abstracts

Silicon carbide mirror refers to an optical mirror substrate or finished mirror component manufactured from silicon carbide (SiC), a synthetic ceramic material characterized by exceptionally high specific stiffness, thermal stability, and low coefficient of thermal expansion, making it particularly suitable for high-performance optical systems operating under demanding conditions such as in aerospace, astronomy, defense, and high-energy laser applications where dimensional stability, lightweighting, and resistance to thermal distortion are critical; mirrors made from SiC can be produced via various methods including chemical vapor deposition (CVD), reaction bonding, or sintering, and often require additional polishing and coating to achieve the desired optical surface finish and reflectivity.

The global Silicon Carbide Mirror market size was estimated at USD 375.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
